CONCLUSION

TEST	DISPOSITION
2.1 Chemical Resistance:	
Black Sample	*CONFORMING
White Sample	*CONFORMING

* Suitability for a given application is dependent upon the chemicals used in a given laboratory.

SAMPLE DISPOSITION

After testing completed, samples were rendered unusable and then disposed of.

SECTION 3

2.1 CHEMICAL/STAIN RESISTANCES:

Date Received: 28-August-2018
Dates Tested: 12-September-2018 to 20 September-2018
Location: Intertek

DESCRIPTION OF SAMPLES:

Part Description: Max Compact Interior Plaques
Material Submitted: Four (4) Black Plaques & Four (4) White Plaques
Material Specification: SEFA 3-2010 Section 2.1
Condition of Samples: Production

TEST PROCEDURE:

Test Method: Per SEFA 3-2010 Section 2.1
The received sample to be tested for chemical resistance as described herein: Place panel on flat surface, clean with soap (Liqui-Nox at 5% concentration) and water and blot dry. Condition the panel for 48-hours at $73\pm 3^{\circ}\text{F}$ ($23\pm 2^{\circ}\text{C}$) and $50 \pm 5\%$ relative humidity. Test the panel for chemical resistance using forty-nine (49) different chemical reagents by the following methods.

Method A: For volatile chemicals – A cotton ball, saturated with the test chemical, was placed in a one ounce bottle (10mm x 7mm test tube or similar container). The container was inverted on the test material surface for a period of 24 hours. Temperature of test: $23^{\circ} \pm 2^{\circ}\text{C}$ ($73^{\circ} \pm 4^{\circ}\text{F}$). This method was used for the organic solvents.

Method B: For non-volatile chemicals – Five drops (1/4cc) of the test chemical were placed on the test material surface. The chemical was covered with a watch glass (25mm), convex side down for a period of 24 hours. Temperature of test: $23^{\circ} \pm 2^{\circ}\text{C}$ ($73^{\circ} \pm 4^{\circ}\text{F}$). This method was used for all chemicals listed below other than solvents.

After 24-hours exposure, exposed areas were washed with water, then a detergent solution detergent (Liqui-Nox at 5% concentration) and finally with isopropyl alcohol. Materials were then rinsed with distilled water and dried with a cloth.

Rating Scale:	Level 0	No effect -No detectable change in the material surface.
	Level 1	Excellent -Slight detectable change in color or gloss but no change in function or life of the surface.
	Level 2	Good -A clearly discernible change in color or gloss but no significant impairment of surface life or function.
	Level 3	Fair -Objectionable change in appearance due to discoloration or etch, possibly resulting in deterioration of function over an extended period of time.
Number of Samples:	Two (2) Panel Types	

ACCEPTANCE CRITERIA:

Per SEFA 3-2010 Section 2.1

Results will vary from manufacturer to manufacturer due to differences in composition and finish formulations and applications processes. Laboratory Grade work surface finishes shall result in no more than 4 Level 3 conditions. Individual test results for the specified 49 reagents will be verified with an established third party independent SEFA 3 test submittal form. Suitability for a given application is dependent upon the chemicals used in a given laboratory.
